WEATHER OF CONCERN

Weather of Concern

- Moderate Santa Ana winds will continue through Sunday with gusts of 30 to 50 mph for the wind-prone areas of Los Angeles and Ventura Counties. These Santa Ana winds combined with humidities in the teens and single digits, along with very dry fuels, will continue to bring the extended period of critical fire weather conditions to much of Los Angeles and Ventura Counties. Extreme fire behavior with rapid fire spread and spotting is possible for ongoing fires as well as for any future fire ignitions.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A strong and persistent high pressure ridge will remain over the U.S. West Coast for the next week to 10 days, with little change in general weather conditions expected. The region will be dry and warm with periods of N-E/Offshore winds and only occasional thin high clouds overhead, especially west of the Cascade-Sierra crest. In most areas west of the crest afternoon temperatures will be 5-15 degrees above normal and humidity will be in the 10-25% range. Poor overnight RH recovery will be common. Night and morning N-E/Offshore winds will gust to 20-30 mph in wind-prone areas. The rare extreme locations like Jarbo Gap are seeing morning gusts in the 40-50 mph range again on Sunday, Monday, and Wednesday.

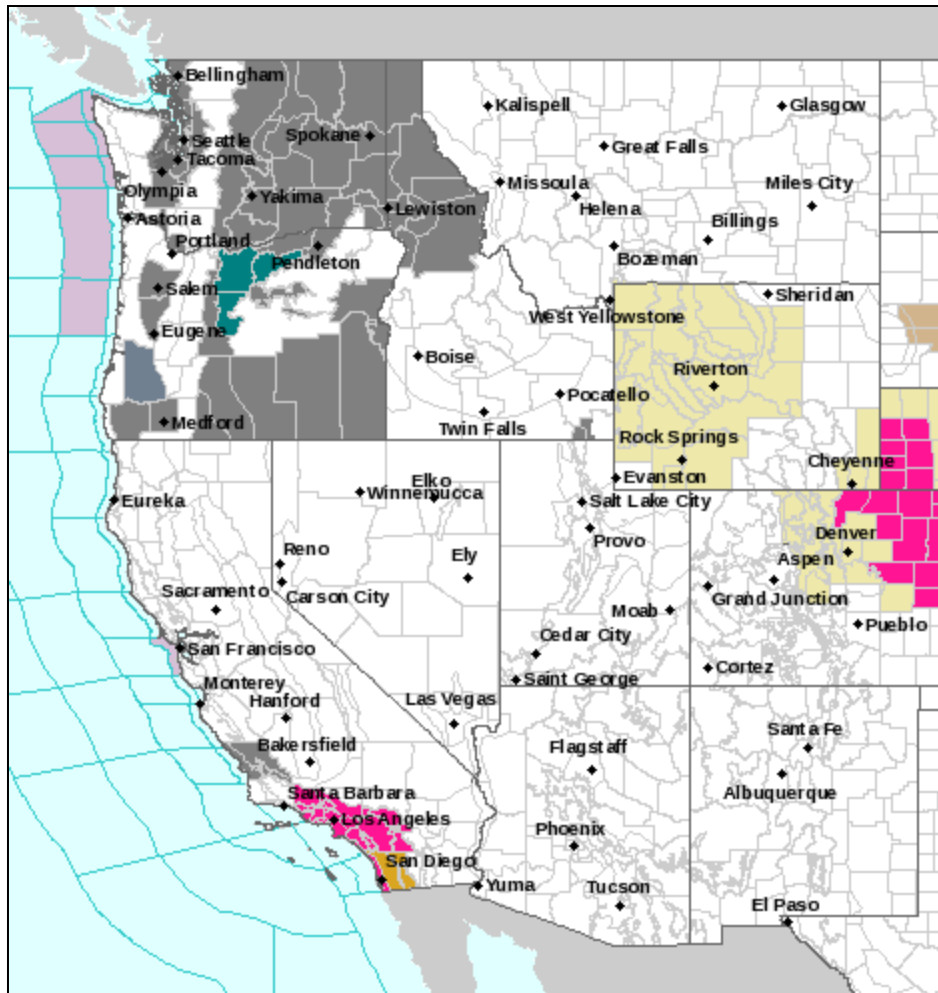

Some canyons and drainages on the west side will be the exception, as strong inversions hold temperatures down and RH up, with only light slope winds. Areas east of the Cascade-Sierra crest will see temperatures a bit closer to normal with somewhat higher humidity with lighter winds.

SOUTHERN CALIFORNIA

Offshore winds through the weekend, becoming stronger once again Saturday night through Sunday ***Warm and very dry through next week***

Winds this morning have slackened off significantly, but some gusts exceeding 40 mph are blowing at higher elevations of the Angeles and Cleveland National Forest. Minimum RH will continue to be in the single digits in all areas except the highest mountain elevations and the San Joaquin Valley. Another round of stronger offshore flow is expected Saturday night into Sunday when east-northeast winds of 20-35 mph with gusts approaching 60 mph will be possible. The strongest winds during this period may occur in San Diego County. Winds may briefly become light Monday. Offshore winds may increase a bit next Tuesday or Wednesday, but overall, expect lighter winds next week. Temperatures may trend downward slightly over the weekend due to an increase in high clouds, but expect highs to remain 10-15 degrees above normal through the period. Minimum RH will remain extremely low each afternoon. No rain is expected at least through the 20th.
